The aim of EBVs are to allow buyers to see how much of an animal's performance is due to its breeding (genetics) and how much has been influenced by the environment that they have been kept in – management, feeding, farm location, housing etc

An animal will pass on half of its genetic merit to its offspring.

e.g. if Ram A has a Scan Weight of +3.33 then his progeny at scanning will be over 1.5kg heavier than average
